INTRODUCTION

BACKGROUND

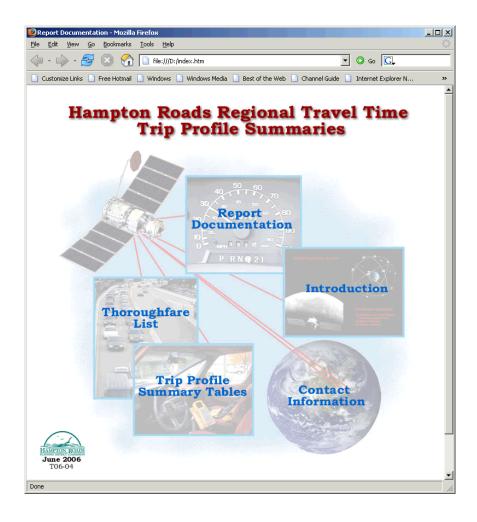

The Hampton Roads Planning District Commission staff has performed a comprehensive regional travel time study approximately every five years since the first travel time study for South Hampton Roads was produced in 1983. The first regional travel time study for the Peninsula was published in 1992. Data collection for the travel time studies prior to 2000 was performed using vehicle equipped with a portable computer and a calibrated distance-measuring instrument. The 2000 and 2005 updates to the travel time study series used global positioning system (GPS) technology for data collection and geographic information system (GIS) technology for data analysis. For this study, travel time data was collected on approximately 1,300 miles of roadway, including all of the thoroughfares that make up the Congestion Management System for Hampton Roads.

Hampton Roads Regional Travel Time has traditionally been distributed in multiple reports. The Trip Profile Summaries report contains travel time summary profiles for approximately 1,300 miles of roadway in Hampton Roads, as generated by the GPS/GIS system. This report is distributed electronically, in the form of a CD-ROM, and will also be made available on the HRPDC website. Other reports in the Regional Travel Time series include trip profile summaries for previous study years, travel time contour maps for selected activity centers, and analyses of the travel time data and trends.

For the purposes of this study the travel time roadway network was divided into 336 segments of varying lengths. One data collection run was made in each direction during the morning and afternoon peak hours for each segment. Data was collected using a vehicle equipped with a GPS receiver. At the office, data was downloaded from the GPS unit into the HRPDC computer network and then processed into the Transportation GIS.

USING THIS REPORT

The Trip Profile Summaries report is provided in a user-friendly, web browser-based format. The CD is designed to auto-start in most popular web browsers, such as Internet Explorer and Netscape. Upon inserting the disk, the main access page will appear.

From this page you may access the following information.

Report Documentation – Includes the abstract and acknowledgements.

Introduction – Provides background information about the Travel Time study.

Contact Information – Who to contact for more information about the study.

Thoroughfare List – An alphabetical list of the 336 runs in the study. For the purposes of this study, some segments are listed by route number rather than by street name. In addition, some segments may have a "combined" name, such as "Colley Ave/Jamestown Cres".

DESCRIPTION OF THE THOROUGHFARE LIST

The Thoroughfare List catalogs the 336 travel time segments by name, from and to endpoints, and jurisdiction. Some segments may run through more than one jurisdiction. The jurisdiction codes are as follows:

CH – Chesapeake PQ - Poquoson GC – Gloucester County PR - Portsmouth HA – Hampton SU - Suffolk

IW - Isle of Wight CountyVB - Virginia BeachJC - James City CountyWM - WilliamsburgNN - Newport NewsYC - York County

NO - Norfolk

NOTES:

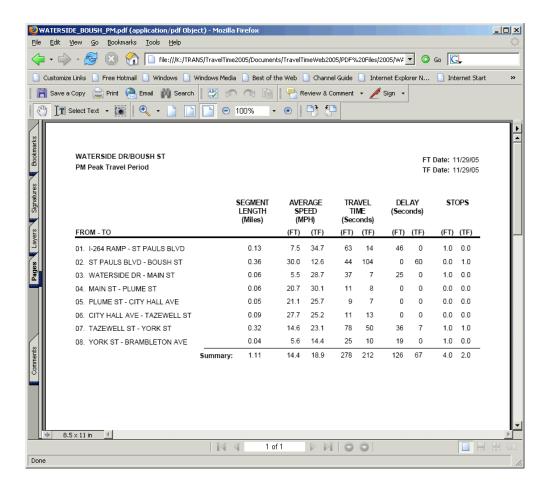

CLOSED – Road was closed to traffic during the data collection period. CONST – Road was under construction during the data collection period.

Trip Profile Summary Tables – From this page the user may access a Trip Profile Summary based on the peak period and street name or route number. By selecting one of the hyperlinked peak periods the user will be directed to a list of roads.

To view a trip profile summary, click on one of the hyperlinked roads in the list.

TRIP PROFILE SUMMARY STRUCTURE

Each trip profile summary page includes the segment name, peak hour, and the dates when the FT (from-to) and TF (to-from) runs were made. For each selected cross street, the Length, Average Speed, Travel Time, Delay, and Number of Stops is shown. Some of these items require a more detailed description:

Average Speed

The Average Speed is computed by dividing the Length by the Travel Time and converting the resulting value into miles per hour (mph).

Travel Time

The Travel Time is the elapsed time for going from one cross street to the next. Travel Time is displayed in seconds.

Delay and Stops

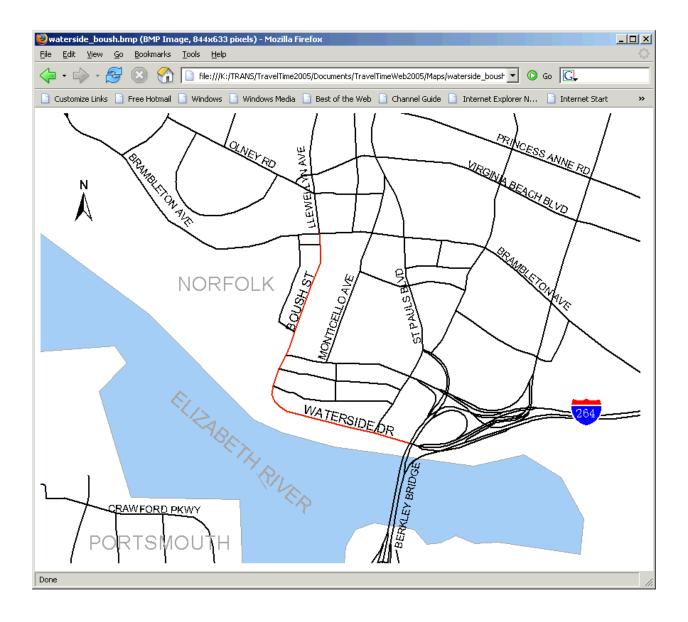

For the purpose of this study, Delay was computed from the time vehicle speed dropped below 5 mph to the moment it exceeded 15 mph. Once the speed dropped below 5 mph, one Stop was declared. The same Stop was in effect until the speed exceeded 15 mph. Delay time accumulated during each Stop condition. The majority of delay time is attributed to the vehicle stopping at signalized intersections, although some Delay occurred if the vehicle had to drop below 5 mph due to turning vehicles or as a result of heavy congestion (stop-and-go conditions).

It should be noted that this definition of delay is not applicable to interstates and expressways.

ROUTE MAPS

A globe icon next to a street name provides a link to a map of the selected route. Such maps have been included for routes that may be difficult for the user to locate. This is particularly helpful in some of the rural jurisdictions where the road may not be familiar to the user. It also assists the user in determining where road names change on routes with multiple names.

Below is an example of a route map.

CHANGES TO THE TRAVEL TIME NETWORK

At the beginning of each Hampton Roads Travel Time study, the road network is reviewed and updated. New roads, or those with significant changes, are added to the network. For this study new roads include:

- The section of Hampton Roads Center Parkway from Big Bethel Road to Harpersville Road
- Moses Grandy Trail in Chesapeake
- Pinner's Point Interchange
- Nimmo Parkway & Upton Dr
- Route 258 Truck (Great Mill Hwy)
- Monticello Ave—James City County

Significant road improvements include:

- The realignment and widening of Route 17/George Washington Highway from the southern end of Dominion Boulevard to the North Carolina state line
- The realignment of the north end of London Bridge Road and Oceana Blvd

In addition, the road network in Isle of Wight was expanded and now contains Smith Neck Road, Rescue Road, Nike Park Road, and Todds Avenue/Warwick Street.

Data could not be collected on the following routes:

- Kings Highway in Suffolk, due to the closure of the Kings Highway Bridge
- Norfolk Avenue in Virginia Beach, due to construction
- Washington Street in Suffolk, due to construction
