

ITEM #15: JAMES RIVER BRIDGE LIFTING CABLE REPLACEMENT PROJECT
VDOT

The District Special Structures Office has coordinated the development of a project for the replacement of the main cables operating the lift span of the James River Bridge between Isle of Wight County and the City of Newport News. The replacement is necessary as the original bridge ropes are over 40 years old and have been rated “severe” since 2012. The project will be scheduled during the timeframe of November 15, 2023 to February 15, 2024 and will require two full operational outages for marine and vehicular traffic.

VDOT staff will brief the HRTPO Board on this item.
