

AGENDA ITEM #13: CENTERVILLE BRIDGE REHABILITATION PROJECT – TRAFFIC IMPACTS AND MITIGATION EFFORTS
Earl Sorey, Chesapeake

The Centerville Turnpike Bridge is a single swing span, two-lane drawbridge located where Centerville Turnpike crosses the Atlantic Intracoastal Waterway north of Mount Pleasant Road in the City of Chesapeake. The bridge was constructed in 1955, carries approximately 16,000 vehicles per day, and is operated by the City. The bridge is in need of major structural repair and is currently weight-restricted.

A complete rehabilitation of the bridge began this month and is expected to last approximately 16 months. The most significant impact to traffic will begin on July 28, 2019 when the bridge is closed completely for approximately six months to accommodate reconstruction of the pivot pier and several other structural elements.

Mr. Earl Sorey, Chesapeake Assistant Director of Public Works, will brief the TTAC on the traffic impacts and mitigation efforts related to the project.
