

AGENDA ITEM #22: CONNECTED AND AUTOMATED VEHICLES – IMPLICATIONS FOR PLANNING AND OPERATIONS
Cathy McGhee, VTRC

Connected and automated vehicles have the potential to significantly change the way we deliver transportation services. There are many projections about not only the impacts of these technologies, but also the timeline for significant levels of deployment. The presentation will discuss a range of options and how they could impact the transportation network in the near to mid-term.

Ms. Cathy McGhee, Virginia Transportation Research Council Director of Research, will brief the TTAC on this item.
